Onderwerp | Uitgangspunten trillingsberekening Nijmeegseweg fase 1
 Datum | 17 september 2025
 Versie | 2.0
 Projectcode | WBD2023-038

De trillingen in de geplande gebouwen dienen als volgt te worden berekend:

- Op basis van het hieronder gegeven trillingsspectrum op maaiveld dient de maatgevende trillingssterkte V_{max} in de gebouwen te worden berekend¹.

Frequentie [Hz]	X-richting [mm/s, ongewogen]	Y-richting [mm/s, ongewogen]	Z-richting [mm/s, ongewogen]
1.0	0.031	0.038	0.037

79.4	0.024	0.018	0.011

Hierbij geldt:

- De trillingssterkte V_{max} moet worden berekend op basis van bovenstaande tabel.
 - De trillingssterkte V_{max} moet vervolgens worden vermenigvuldigd met een factor van 2,5*.
- De gemiddelde trillingssterkte V_{per} dient vervolgens indicatief als volgt te worden berekend:
 - Voor 3 concerten (in 2023 en 2024) is op maaiveld de trillingsterkte V_{max} per 30 seconden vastgesteld. In onderstaande tabellen is per 30 seconden voor de X-, Y- en Z-richting aangegeven hoe hoog de $V_{max,i}$ (i is hier de richting, dus X, Y of Z) in de betreffende 30 seconden is als functie van de maximale $V_{max,i}$ voor die richting over alle concerten en 30-secondeperioden heen.

¹ De tertsbandfrequenties bij 2.5 en 3.2 Hz zijn afkomstig van evenementen in het Gelredome, de trillingen bij de overige frequenties zijn omgevingstrillingen (zoals van verkeer in de huidige situatie). In de berekeningen dient hiermee rekening te worden gehouden.

- b. De in de tabellen benoemde percentages dienen te worden vermenigvuldigd met de in het gebouw berekende trillingssterkte (uit 1.a) per richting (X, Y of Z). Hierna dient de gemiddelde trillingssterkte V_{per} te worden berekend conform de SBR B-richtlijn.
- c. De berekende V_{per} -waarde dient te worden vermenigvuldigd met een factor van 2,5*.
- d. Vervolgens dient de maximale gemiddelde trillingssterkte V_{per} te worden vastgesteld en getoetst per richting, per concert en per periode. De V_{per} behorend bij de avondperiode van het concert in september 2023 dient ook te worden getoetst aan de grenswaarden in de nachtperiode.

* Deze factor is worst case. Bij vergunningverlening wordt de definitieve factor bepaald.
